

### When You Choose Your Phonograph

don't let prejudice in favor of any certain make or against any other makes stand in the way of your making a wise choice.

Every dealer will tell you that his particular phonograph or talking machine has the best "tone," the greatest artists, the handsomest cabinets, the best motor, the best reproducer, or any number of other things. We tell you that

### The NEW EDISON

"The Phonograph with a Soul"

Recreates the human voice and the music of human-played instruments with such fidelity that the actual voices and instruments cannot be distinguished from the New Edison's Re-Creation of them, but you will never fully believe what any dealer tells you when they make conflicting statements.

The wise way to choose your phonograph is to let all claims pass in one ear and out the other, then have the several makes of phonographs and talking machines in which you are interested sent to your home on trial, where you may make direct comparisons among them in the quiet of your own home and decide which one you would like to keep—which one you think you would enjoy hearing just as much five years from now as you do today.

Be your own salesman. Hear all makes of phonographs and talking machines sold in your community, in your own home. Then decide.

We will gladly send a New Edison to your home without the slightest obligation on your part.

### FREE FAIR PRIZES IN W. S. S. STAMPS

Oklahoma Fair Secretaries Asked to Make Payment of Premiums in War Savings Stamps.

Chairman J. M. Aydelotte of the Oklahoma State Council of Defense has issued a letter to secretaries of free fair associations in all counties in the State urging all associations

to make their premium awards in War Savings Stamps this year, instead of in cash. A survey is being made of the State to determine the number of associations which will adopt this rule.

It is estimated that this would swell the State W. S. S. receipts by at least \$50,000.

Are you keeping up with your W. S. S. assessment?

## Business Is Good

and should be the best in years this summer and fall in view of the most excellent crop prospects.

This store has built up its reputation and expects to maintain that name through handling fresh merchandise and rendering careful and prompt service in every way.

No article is too small to receive our attention, and no day is too busy to handle.

We especially desire country trade, and our terms and the best prices for fresh produce are always at hand.

## Southeastern Tenders Clinic in Didactic Anatomy to Physiology

On Friday, July 12, from 12 to 5 o'clock in the afternoon, was tendered the third term clinic in anatomy before the combined classes of physiology in the summer session at the Normal. Every preparation had been made to make this the most successful clinic in didactic anatomy ever offered to the Normal School students. Owing to the splendid activities of committees elected from the classes, everything was prepared to facilitate the work of the clinic, and several new features were offered this summer. When the hour had arrived for the opening of the clinic the students and guests assembled in the amphitheatre seating room, and the students were drawn a number were turned away in the corridors who had hoped to secure an eleventh hour seat in the event of the absence of a ticketed observer.

Through the courtesy of the medical profession of the city and others, a splendid array of surgical instruments covered the immaculate instrument and material table. Each member of the staff occupied a particular position at the table, dressed in regulation costume of the operating room, and employing the technique of antiseptics. As an instrument was called for it was passed from the table to a sterilization bath and then to a surgeon who manipulated with gum gloves while the students looked down from their seats over the operators' shoulders and listened to the lecture which accompanied the operations.

The dog was led in alive, and the lecture opened on anaesthetics and anaesthesia, while assistants administered chloroform to the subject. The action of the agent was followed by the staff with the use of a stethoscope and announcements made. This was followed by a study of topographical anatomy and the delineation of surgical areas.

Four new features were introduced this summer in which operations were performed for cataract of the eye and the removal of the crystalline lens involving trichotomy; the operation for appendicitis and the bimanual examination of the gall-bladder for calculi, and the operation for cerebro-spinal meningitis. In order to facilitate the examination of the arterial system an operation was performed to inject the specimen with Delafield's Haematoxylin by entering the left carotid artery, arterial blood being first withdrawn by drainage tubes for cloture, fibrin, and serum tests. This was followed by a study of the external musculature after the skinning of the specimen. The specimen was then laid on the dorsal aspect when the operators opened the abdominal cavity and a study of splanchnological features was made in situ. In cutting away the right abdominal wall the sutured incision for appendicitis performed a few minutes before was excised and passed around the clinic on a platter for observation, revealing the conjoined peritoneum. As the viscera were lifted away to demonstrate the position and relation of the less obvious parts the effects of the injection became more evident in the extreme visibility of the blood system. Contents of the gall-bladder were withdrawn by a drainage tube and passed in test tubes for examination. As each organ was passed over its chief function, pathology, and hygiene were pointed out. The next operation was the opening of the thoracic cavity in which the

heart and lungs were disclosed, and the position and action of the diaphragm and its splanchnosis shown. The pleural cavities and lining were pointed out, and the heart in its pericardial cavity swimming in the mediastinum. The lungs were then inflated from the trachea by means of a thistle tube when its nature and capacity became evident. Pathology of this organ was disclosed indicating areas of scoriated tissue. The heart was then excised and dissected and passed on platters to the students, followed by a dissection of the lungs, trachea and voice box. With the opening of the neck, the Eustachian tubes were probed and the tonsils removed, and a lymphatic gland removed from the base of the neck. This was followed by a removal of the hyoid bone from the root of the tongue, rarely seen in museums or pictured in the texts.

Having completed the opening of the cavities the whole alimentary canal was then traced from the mouth to the anus and every region and diverticulate organ located and discussed. In the pelvic cavity sero-fal hernia was artificially demonstrated, the arch and girdle removed, and the urogenital system inflated with fluid and dissected away in toto and connected, with an explanation of its glands, ducts, blood and nerve supply. Having dissected the subject of everything except the brain and spinal cord return was made to the head and the brain removed, pointing out its meninges, fissures, lobes, and nerve connections. The clinic, after five hours of work, was then pronounced closed after a complete review of gross and related anatomy which had designed to offer in visual manner complete demonstration of the leading features studied during the summer session in texts and lectures by the instructors.

In addition to the new equipment secured for this practical work by the department at the Normal, the school is indebted to Dr. J. A. Haynie, and Dr. W. S. Williams for surgical instruments, John Bryant of Holmes Bros. for injection instruments, while Miss Hallie McKinney of the domestic science department furnished the porcelain ware, and Prof. Allen Berger of the manual training department furnished the table covers and dissecting table top, and Kenton Mattox of the Bee Hive furnished the linen caps.

The staff for the third term clinic in anatomy was composed as follows: M. M. Wickham, first surgeon and director; M. P. Hammond, second surgeon; P. L. Moore, assistant to staff; Elizabeth Petty, nurse and assistant to first surgeon; E. O. Wann, nurse and assistant to second surgeon; and Eleanor Coulson, instrument and materia attendant.

The class in study was as follows: Jewell Leary, Aylesworth; Bernice Sawyer, Bokshito; R. W. Thompson, Kenefick; Saleema Mousa, Krebs; Ida Clinkscales, Atoka; Imogene Farris, Roswell; Irene Goodman, Milburn; Lillie McKinney, Mill Creek; Sallie Reeves, Platter; Myrtle Patterson, Eufaula; Annie Cole, Wade; Byrd Holland and Mabel Grimes, Achille; Opal Morehead, Armstrong; Mary Reeder, Folsom; Kate Sweney, Bokshito; Pauline Allen, Roswell; Floyd, Ruth Rambo, Victor Westerheide, Edna Mae Brooks, Cora Mosley, Marie Norville, Mae Serages, and Willanna Walls of Durant. The guests were: Prof. A. E. Rilling, Spine; Prof. C. E. Fair, Wilburton; Prof. M. A. Nash, Okla.; and Miss Bontros Boyce, Atoka.

### FROM MILLBERRY

(Too late for last week.)

The Fourth of July was celebrated by the farmers by working their crops.

Miss Fannie Belle Hutsey visited relatives here Friday and Saturday.

Mr. Roberts and family are visiting relatives, Mr. and Mrs. McKinney, this week.

A large crowd attended the Christian Endeavor Saturday night. Much interest is being aroused.

Mr. and Mrs. I. W. Lamb of Denison visited Mr. and Mrs. T. A. Lamb Friday.

A large crowd of young people attended a party at Jim Bailey's Tuesday night, and a good time was reported.

Mrs. Carroll from Woodville visited her son, Ross Allen, Monday and Tuesday.

Mrs. Coffey visited relatives out Monday this week.

Little Russell Allen is visiting his grandmother at Woodville.

T. A. Lamb was in Denison Friday.

A. J. Wintersby while working at the mill, fell from a scaffold and was injured.
